The screenshot displays the Genie IDE interface. On the left, a file explorer shows a workspace with folders like 'system', 'bright', 'career', 'ndlovu', 'retail', and 'shares received', along with a 'samples' file. The main editor shows a SQL query for 'QUESTION 14: Show total and average budget per department. Only include departments with average budget above 70000'. The query is as follows:

```

179 --QUESTION 14: Show total and average budget per department. Only include
180 departments with average budget above 70000
181 SELECT department,
182 SUM(budget) AS total_budget,
183 AVG(budget) AS avg_budget
184 FROM career.industry_projects
185 GROUP BY department
186 HAVING avg_budget > 70000;
187

```

Below the query editor, a table titled 'Table' displays the results:

	department	total_budget	avg_budget
1	IT	270000	135000
2	Finance	80000	80000

At the bottom of the editor, a status bar indicates '2 rows', '0.475s runtime', and provides links for 'See performance (1)', 'Checked for improvements', and 'Refreshed Now'.

On the right, the 'Genie Code' panel is active, showing the Genie logo and the text 'Run multi-step data and AI tasks'. It includes buttons for 'What can Genie Code do?', 'Analyze some data', and 'Summarize and interpret the query results'. At the bottom of this panel, it says '@ for objects, / for commands, ! for history' and 'Only use the agent with code and data you trust'.
